To buy a version of a music product of more than 10€ from an author or publisher other than the one selling it is not possible without specific authorization from the said author. Myth, Imagination, and Inference by Preference Myth, Imagination, and Inference by Preference () is an influential book by Martin Heidegger first published in the winter of 1935–1936. The book is a critique of the interpretation of the philosopher Johann Friedrich Herbart. Significance Heidegger's book was the first to make the case for treating philosophy as modern poetry or literature. Herbart's system of philosophy and psychology was treated as formal, categorical thinking. In the context of the rise of positivism, this was particularly misleading. Heidegger also showed how the philosophy of the German idealists and the phenomenologists of the early 20th century were already attuned to the problem of language. Heidegger's book is a critique of a particular interpretation of Herbart, and a different book called Herbart (1935) is a critique of another interpretation. The book is divided into three parts. In the first part, Heidegger breaks from Herbart's idea that the ideal goal of the human being is to be in harmony with its inner nature. He argues instead that the way that humans and their abilities are conceived, is a consequence of the world in which they live. In contrast to Herbart, Heidegger argues that "they are always already affected by the world." The second part of the book is further exposition of this idea. Selected bibliography The collected edition has some background material in English by Heidegger, as

well as an introductory essay by Michael Inwood. In German German titles are in italics. Part One: Substance, Space and Time
